

TRYPTONE SOY BROTH (TSB)

APPLICATION	<p>Tryptic Soy Broth (TSB) is a nutritious medium used for the detection, isolation and cultivation of fastidious and nonfastidious microorganisms including bacteria and fungi from clinical specimens, environmental sources and other materials.</p> <p>This medium complies with the recommendations of the harmonized method in the United States Pharmacopoeia (USP) and European Pharmacopoeia (EP).</p>	
PRINCIPLE AND INTERPRETATION	<p>The combination of casein peptone and soy peptone makes the medium nutritious by providing amino acids and long chain peptides for the growth of microorganisms. Sodium chloride maintains osmotic balance in the medium. Dipotassium phosphate is a buffering agent. Dextrose is an energy source.</p> <p>The addition of lecithin and tween80 makes the medium particularly suitable for detecting microbial contamination in cosmetics.</p>
